Q: What do you consider your organization's differentiator?

A: DataRobot is unique in three ways. First, our platform is open architecture and can integrate with nearly any database, information feed, visual display, or software stack. Second, we are adapt at deploying machine learning models on the edge which require no cloud connectivity to operate, ensuring full functionality in communications-denied environments. Third, and most important, WE ONLY DO AI. Unlike other DoD software providers or defense primes, we spend our entire research and engineering resources delivering best-in-class AI support to the American service member.

Q: What is something unique about your product or service?

A: The DataRobot platform offers three groundbreaking AI products to accelerate and democratize AI for the warfighter: data preparation, Auto-Machine Learning, and Machine Learning operations. All three require no coding experience and support the rapid building and deployment of custom, mission-specific AI applications. We also build custom AI-enabled solutions for various federal government agencies when special circumstances dictate.

Q: What are you most proud of?

A: DataRobot has invested more than \$500 million and 1.4 million engineering hours into our AI platform, more than the top 15 defense primes combined. We have leveraged this investment for hundreds of millions of dollars of value and operational efficiency improvements for the DOD, DHS, HHS, intelligence community, and more. We are 100% committed to working with the federal government and the military.

Capabilities:

Artificial Intelligence, Machine Learning, Sensor, Edge, Automation, Predictive Analytics, Predictive Analysis
